

ABSTRACT OF THE DISCLOSURE

A glove box assembly having an identifying member formed therein, by means of which the knob of the glove box assembly, which is selectively mounted into the left or right side of an instrument panel of an automobile is easily assembled, while being viewed with the naked eye of a worker. The glove box assembly comprises a housing selectively mounted into the left or right side of an instrument panel from a driver seat of the automobile, a lid rotatably attached to the front part of the housing, a knob rotatably fitted to the lid such that the housing is opened or closed by means of the lid, and an identifying member for identifying the knob fitted into the lid.
